ADMIT Enhancements

New Custom School Branding Capabilities

◄ In addition to the current custom logo functionality already live in production, we'll soon be rolling out powerful custom school branding capabilities that allow further theming of the navigation bar, menu tabs, as well as font and icon colors so that Admit can be easily customized to feel like the perfect companion to school websites.
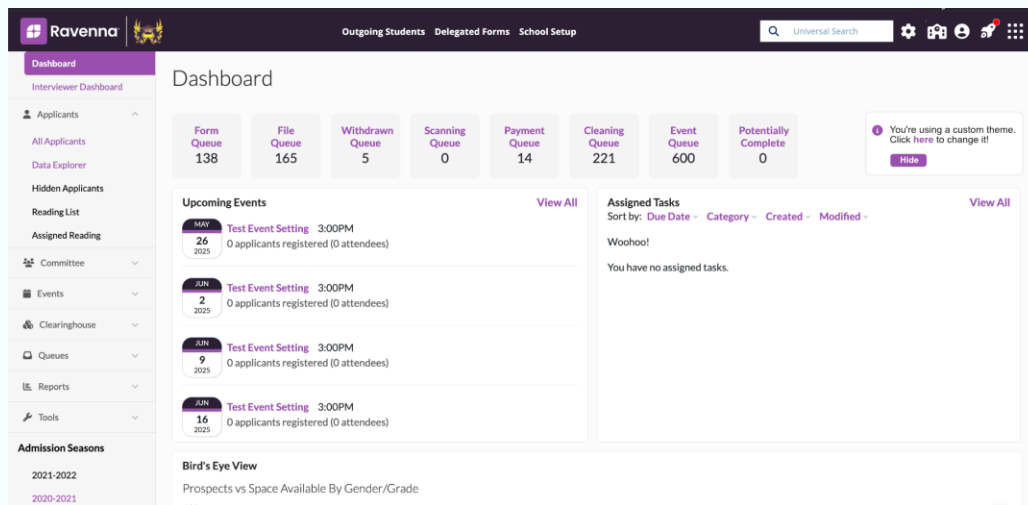

Family ID Fields in Data Explorer

◄ Added Family ID fields to the Data Explorer, so that records can now be filtered and reported by Family ID.

NMI Payment Updates

◄ In lieu of NMI being the new drop-in payment solution in Ravenna, we changed the previous "unconfigured payment processor option" verbiage (seen at initial setup or when set to an unconfigured state) to **"NMI Unconfigured."**

ADMIT Enhancements Cont.

Create and Manage Event Categories

◄ School administrators can now create and manage their own event categories directly within Admit. This change moves a previously centralized task, which was time-consuming when handled via the Admin Dashboard, directly into the hands of schools. This shift empowers schools with complete control over their event planning and organization and eliminating potential bottlenecks, even for those managing a large volume of categories.

Events Page Updates

◄ The **upcoming events** page now displays events starting from the current day to provide a more relevant and immediate view for school administrators. While the calendar view still defaults to a month timeline, this change to the default initial data presented helps serve up the most pertinent data possible at first-glance.

Events Calendar Updates

◄ The calendar now shows only current and future events. Past items are automatically filtered out, making the calendar cleaner and easier to use.

Withdrawn Students Filter Update

◄ Schools can now filter lists of withdrawn students by their application status at the time of withdrawal. This new filter, labeled **status while withdrawing**, helps high-volume schools analyze withdrawal patterns with greater precision. It's now available in both the Data Explorer and **all applicants** tools and functions across all admission seasons, providing a critical data point for deeper analysis.

HUB Enhancements

Redesigned Directory Filter Experience

- We're redesigning the directory filter experience as part of our larger initiative to provide a remarkably effortless, first-in-class user experience to parents in Hub.
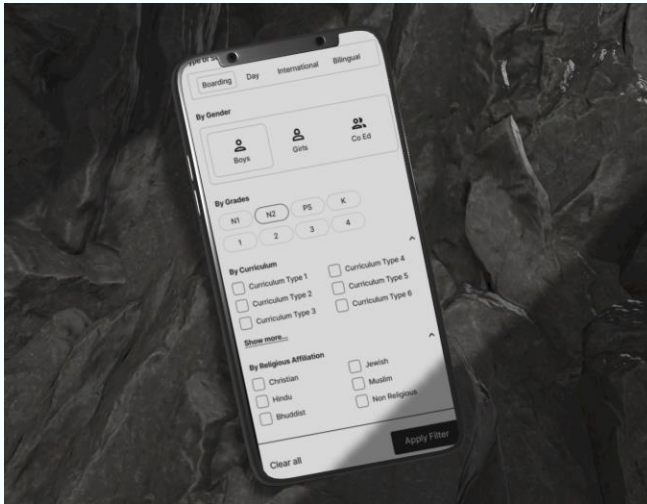

Login Updates for Parents

- Parents can no longer sign into sandbox environments. This blocks accidental usage of test sites and keeps testing data separate from live school activity.

Decision Template Logo Customization

- Schools now have the option to remove their logo from decision templates so it doesn't display to parents in Hub. Giving schools greater flexibility in customizing communications and helping to make sure that the way decisions are presented to parents can be customized to branding preferences.

Sandbox vs. Production Experience

- The login experience now clearly differentiates between sandbox and production. Small messaging updates reduce confusion, especially for users navigating between testing and live portals.
